

Evaluation of Linked List Implementation

Create a RED Team Name List.

Insert the members from BLUE Team in alternate positions.

Display the RED Team list content in the 2nd 5th 7th and 10th positions

Search for the name list and display the positions where there are team members having their names starting with "S"

Consider the condition that the team captain should have a name starting ONLY with "A" and last member in the team should have a name starting ONLY with "Z" (Insertion to be performed accordingly)

Identify all the RED team members and delete them from the list.

Display the list wherever required
